## EXPERIENCE

### Senior Software Engineer, PointClickCare

*May 2021- Present*

- Built scalable micro-service and RESTful APIs to support dynamic data visualization widgets that retrieve real-time health information for over 2 million patients utilizing Java, SQL & Typescript.
- Persuaded an initiative to improve reliability and reduce 40% of QA testing time by developing a browser-based automation framework on top of the existing javascript-based testing framework.
- Gained and executed industry knowledge surrounding best software security practices, enhanced cluster efficiency and optimization of page load times.
- Developed communication skills in an agile work environment by taking up the responsibility as scrum master and facilitating daily scrum meetings, weekly sprint plannings and code reviews.

### Software Engineering Intern, PointClickCare

*May 2020 - Dec 2020*

- Built an internal pub/sub notification tool allowing any product within the company to utilize and receive/relay information to its customers directly from one centralized service.
- Implemented a missing functionality of Microsoft Power BI Embedded to deliver event-based analytics to Azure Data Factory, providing an unclouded view of customer interactions with Power BI based products. Allowing for numerous reliable business decisions to be made.

### Software Engineering Intern, Agilis Networks

*May 2019 - Aug 2019*

- Architected and developed a customer-facing system to onboard and set up clients, allowing for a smooth transition of service using Python, Javascript & SQL.
- Reduced turnaround time by 50% for customer onboarding by developing a pipeline of automated procedures which verify uploaded documents, automatically generate forms and notify departments using a pub/sub service.

## PROJECTS

### Rewards System App

*Jan 2021*

- Architected a reliable in-app reward system for a Coffee Shop Franchise that receives up to 3000 monthly users.
- Utilizes Cloud Services to save user data and scale according to peak demand.
- Technologies used: AngularJS, Bootstrap CSS, Ruby on Rails.

### Heart Disease Prediction App

*Nov 2020*

- Reported users their risk of heart diseases and irregularity using recorded fitness band data.
- Acquired more consistent results by utilizing a Random Forest Machine Learning model trained with a set of 10,000 data points.
- Technologies used: Tensorflow, Python, Flask, Swift for IOS Devices

## EDUCATION

### B.Cosc, Mathematics & Computer Science (Co-op)

Laurentian University/Universite Laurentienne

*Graduated May 2021*

- Awards: Deans Honor List, Honors Entrance Scholarship
- Relevant Coursework: Data Structures, Algorithms Analysis, Database Management, Artificial Intelligence, Systems Programming & Computer Architecture

## TECHNICAL SKILLS

Java (Proficient), JavaScript (Proficient), HTML (Proficient), PHP, Python, SQL, C++, React, Redux

## OTHER

Certified ScrumMaster®
